

## **NEW TRENDS IN QUALITY & RELIABILITY OF ELECTRONIC COMPONENTS**

**Titu I. BĂJENESCU\*, Marius I. BĂZU\*\***

*The paper gives an overview of the present situation in the domain of quality & reliability of electronic components – the front line in the battle for the best products. The main approaches in quality & reliability, such as: total quality management, building-in reliability, concurrent engineering, screening & burn-in, and reliability evaluation are examined and conclusions about best practices for electronic components are drawn.*
